• ABOUT ME

I am a seasoned professional with a robust foundation in Software Engineering and Development. My journey through the world of programming has sharpened my expertise, equipping me with a comprehensive skill set that I am keen to apply. My goal is to leverage both my hands-on experience and my conceptual grasp of the field to make a significant impact within a forward-thinking team that is committed to innovation and excellence.

• SKILLS

AI | Codex | SQL | AWS | Java (computer programming) | C++ | Linux | Docker | IaC | Scrum Master | git

• WORK EXPERIENCE

28/2/2025 - CURRENT - PRISTINA, KOSOVO

APPLICATION SUPPORT AND DEVELOPMENT OFFICER KEP TRUST

- Administered and managed **Microsoft SQL Server environments**, ensuring high availability, performance, and data integrity across critical systems.
- Led initiatives to **optimize application performance**, aligning database design and query efficiency with application requirements and business needs.
- Coordinated **cross-system integrations and database migrations**, including version upgrades and data transitions, ensuring minimal downtime and continuity.
- Monitored application and database performance, proactively identifying bottlenecks and implementing improvements **resource utilization and scalability**.
- Contributed to **capacity planning and infrastructure design** for new applications, supporting long-term growth and system reliability.
- Collaborated closely with the IT Manager to **plan and oversee development projects**, ensuring alignment between technical execution and organizational priorities.
- Acted as a coordination point between **development teams, database administrators, and business stakeholders**, facilitating clear communication and requirement alignment.
- Supervised and enforced **data integrity, security policies, and compliance standards** across applications and databases.
- Supported the design and development of **web-based database systems and subsystems**, contributing to architecture decisions and implementation.
- Assisted in **project planning, progress tracking, and delivery coordination**, ensuring timely execution and operational readiness of new systems.

Business or sector Financial and insurance activities | **Department:** IT | **Email:** info@keptrust.org | **Website:** <https://keptrust.org/>

9/2025 - 1/2026 - PRISTINA, KOSOVO

TECH-PROJECT COORDINATOR - FREELANCE BZZZ ENTERTAINMENT

- Coordinated the end-to-end delivery of a technology initiative focused on **automating client registration workflows**, improving efficiency and reducing manual processing.
- Led the implementation of **client payment management processes and system integrations**, ensuring seamless data flow and transaction reliability.
- Served as the primary liaison between **technical teams and business stakeholders**, aligning technical execution with operational and strategic goals.
- Elicited, refined, and translated business requirements into actionable deliverables; tracked progress

using structured project management practices.

- Oversaw testing, validation, and rollout phases, ensuring smooth deployment and minimal disruption to ongoing operations.
- Ensured **on-time delivery, system reliability, and scalability**, supporting long-term growth and performance optimization.

Business or sector Arts, entertainment and recreation | **Department:** Development | **Email:** hr@bzzz.tv | **Website:** <http://www.bzzz.tv/>

21/6/2024 - 1/11/2024 - PRISTINA, KOSOVO

IOT SOFTWARE ENGINEERCACTUS SH.A

- Led the **design and development of scalable software applications and services**, ensuring alignment with business requirements and technical standards.
- Oversaw the **implementation, deployment, and ongoing maintenance** of applications, ensuring stability, performance, and reliability.
- Designed and integrated **IoT solutions**, enabling seamless communication between devices, data pipelines, and backend systems.
- Conducted **code reviews and provided technical mentorship** to junior developers, improving code quality and team productivity.
- Optimized applications for **high performance, scalability, and efficient resource utilization** across different environments.
- Diagnosed, troubleshot, and resolved **complex software issues**, minimizing downtime and improving system resilience.

Business or sector Information and communication | **Department:** IT | **Email:** info@cactus.com | **Website:** <https://www.cactus.com/>

1/12/2021 - 21/6/2024 - PRISTINA, KOSOVO

SOFTWARE EMBEDDED ENGINEERHELLOCARE.AI

- Engineered **high-performance, reliable software solutions** in Java and C/C++, ensuring code quality, maintainability, and efficiency.
- Performed comprehensive **testing, debugging, and root-cause analysis**, enabling effective troubleshooting and system stability.
- Drove the **full software development lifecycle (SDLC)**, from planning and architecture design to deployment, monitoring, and ongoing support.
- Applied advanced knowledge of **algorithm design and complexity analysis** to build efficient and scalable solutions.
- Designed and optimized **database systems**, leveraging indexing, query tuning, and data modeling for improved performance.
- Improved product performance through **continuous testing, profiling, and iterative optimization** during development cycles.
- Developed and maintained **embedded systems**, focusing on performance-critical and resource-constrained environments.
- Worked with **Linux kernel-level programming**, contributing to low-level system functionality and performance enhancements.

Business or sector Professional, scientific and technical activities | **Department:** Hardware | **Website:** www.solaborate.com

12/2019 - 9/2020 - PRISTINA, KOSOVO

3D PRINTING TECHNICIANFORMON SH.P.K

- Assembled and configured **3D printers**, ensuring accurate calibration and optimal operational performance.
- Conducted thorough **hardware and software testing**, identifying issues and ensuring reliability and print quality.
- Performed ongoing **maintenance and troubleshooting** of 3D printers, minimizing downtime and extending equipment lifespan.

- Designed and developed **3D models** for printing, optimizing structures for precision, material efficiency, and functionality.

Business or sector Manufacturing | **Department:** Production

● EDUCATION & TRAINING

2024 - MARYLAND, UNITED STATES

AGILE PROJECT MANAGEMENT BY UNIVERSITY OF MARYLAND - EDX ONLINE LEARNING

- **Applied Scrum for Agile Project Management**
- **Sprint Planning for Faster Agile Team Delivery**
- **Agile Innovation and Problem Solving**
- **Agile Leadership Principles and Practices**
- **Agile Process, Project, and Program Controls**

Field(s) of study: Project Management

6/2021 - 9/2021 - PRISTINA, KOSOVO

INTERN ONBOARDING PROGRAM- PROCREDIT BANK

- **Completed rigorous coursework in Ethics Banking, honing integrity and professional conduct.**
- **Developed analytical acumen through Critical Thinking and Effective Arguments training.**
- **Mastered Time Valuation of Money principles through advanced Financial Mathematics.**
- **Explored the intersection of Identity and Responsibility in contemporary business practices.**
- **Investigated the dynamics of Society and Development, gaining insights into socioeconomic impacts.**
- **Acquired foundational knowledge in Accounting, essential for financial analysis and reporting.**

Field(s) of study: Finance, banking and insurance

10/2017 - 10/2021 - PRISTINA, KOSOVO

BACHELOR OF MANAGEMENT OF MECHATRONICS- UBT - HIGHER EDUCATION INSTITUTE

The university where I study covers some interesting subjects that are related with technology, such as:

- **Mechatronic Systems**
- **Mathematics**
- **Electronics**
- **Control Systems**
- **Computer Science**
- **Dynamic Control**
- **Robotics**
- **Software Systems**
- **Information Technology**
- **Embedded Systems**

Field(s) of study: Management of Mechatronics | **Final grade:** 9 | **Type of credits:** ECTS | **Number of credits:** 180/180 |

Thesis: Control Systems with Vision Based Control | **Address:** Lagjja Kalabria10000

SOFTWARE DEVELOPER - AI-ASSISTED APPLICATION DEVELOPMENT

Vehicle Fleet Control / VehicleManagement 2.0 - Project-based software development

Role: Software Developer | Experience: Hands-on product development using AI-assisted engineering and prompt engineering | Status: Ongoing

PROJECT OVERVIEW

Designed and developed a multi-tenant fleet operations platform that brings vehicle lifecycle management, drivers, handovers, maintenance, inventory, purchasing, fuel and charging, document compliance, accidents and claims, reservations, notifications, imports, and reporting into one system. Took responsibility for translating business requirements into domain rules, API contracts, user workflows, data models, validation, and tested implementation.

AI-ASSISTED DEVELOPMENT AND PROMPT ENGINEERING

- Applied AI as a practical development partner for architecture exploration, code generation, refactoring, debugging, test design, documentation, and technical review while retaining ownership of final implementation decisions and quality.
- Used prompt engineering to structure complex work: supplied repository context, business constraints, existing conventions, API contracts, and acceptance criteria; decomposed large features into verifiable implementation steps; and iterated through evidence-based feedback.
- Directed AI-assisted analysis of edge cases including tenant isolation, permission scopes, status transitions, odometer validation, reminder precedence, file security, inventory quantities, duplicate prevention, and historical data preservation.
- Validated generated solutions through human review, automated tests, migration checks, API verification, and visual UI review so AI accelerated delivery without replacing engineering accountability.

FRONTEND DEVELOPMENT

- Next.js 14 App Router, React 18, and TypeScript 5.8: built route-based pages, detail views, dashboards, forms, dialogs, data tables, reports, and reusable domain components.
- Shared component architecture: created reusable application shell, navigation, headers, comboboxes, entity dialogs, vehicle forms, maintenance workspaces, inspection results, and dashboard panels instead of duplicating feature logic.
- API and authentication integration: implemented authenticated fetch flows with Bearer JWTs, localized error handling, no-store data reads, protected file downloads, company switching, permission-aware navigation, and session-expiry behavior.
- Localization and usability: supported English and Albanian through i18next/react-i18next; used controlled inputs, browser constraints, manual validation, responsive layouts, and clear operational workflows for different staff roles.

BACKEND, DATA, AND SECURITY

- FastAPI with Python, Pydantic 2, and Uvicorn: developed REST endpoints, request/response schemas, validation, localized error contracts, multipart upload flows, imports, exports, and operational reports.
- SQLAlchemy 2 and Alembic: designed a relational domain model and versioned migrations for companies, users, roles, vehicles, drivers, assignments, work orders, services, programs, inspections, inventory, documents, accidents, reservations, notifications, and audit logs.
- SQLite as the configured runtime database with explicit transaction handling, tenant-aware sessions, company ownership checks, relationship validation, uniqueness rules, and migration audits; kept the architecture ready for future database evolution.
- Authentication and authorization: used signed JWT sessions, password hashing, permission catalogs, role grants, organizational scopes, and backend enforcement so UI visibility is never treated as the security boundary.
- Private file and data handling: implemented authenticated attachment downloads, MIME/signature/size checks, safe storage paths, audit trails, notifications, and redacted change snapshots for sensitive operational records.

ARCHITECTURE AND ENGINEERING PRACTICES

Browser UI	API client	FastAPI routers	Auth + tenant context	Domain services	SQLAlchemy ORM	SQLite
------------	------------	-----------------	-----------------------	-----------------	----------------	--------

- Layered request flow: the frontend calls authenticated REST APIs; backend dependencies establish identity, company, and permission context; endpoints coordinate domain services; services apply business rules and persist changes through the ORM.
- Fleet-domain depth: implemented lifecycle rules for vehicle status, assignments and handovers, maintenance completion, service reminders, program compliance, inspections, supply movements, document renewals, accident transitions, reservation overlap, and TCO reporting.
- Reliability and maintainability: used explicit commits and rollbacks, atomic completion workflows, duplicate prevention, protected history, centralized formatting/constants, typed DTOs, and stale-response protection in data-heavy frontend flows.
- Delivery mindset: combined Agile/Scrum planning, incremental feature delivery, requirement clarification, code review, testing, migration verification, troubleshooting, and documentation to move from idea to operational product capability.

TECHNOLOGIES

Frontend: Next.js 14, React 18, TypeScript, CSS, i18next/react-i18next | Backend: Python, FastAPI, Pydantic, Uvicorn, SQLAlchemy, Alembic | Data: SQLite, SQL, relational modeling, migrations | Security: JWT, password hashing, RBAC, tenant isolation | Engineering: REST APIs, Docker, Git, pytest, Playwright, AI-assisted development, prompt engineering
